First Opening

❶ Slide the emergency keyhole cover down.
❷ Insert the emergency key into the key hole and turn it counterclockwise.
❸ Turn the handle clockwise to open the gun cabinet.
❹ Open the door, and then open the cover of battery box.
❺ Insert 4 AA batteries (not included). When the batteries are inserted correctly. the indicator light will light up once.

⚠ IMPORTANT

1. Please do not use rechargeable batteries.
2. Do not mix different brands of batteries, and used and new batteries, as it may burn the panel.
3. If the panel is not powered after installing the battery, please check if the battery is low.

User Code Programming

1. Open the safe, keep it open, short press the setting button (on the inner side of the door) , the safe beeps once and the keypad lights on.
2. Input a new code(3-12 digits),then press # to confirm. The buzzer plays a chord, indicating that the code is successfully set.
3. Test the code before you close the door.

⚠ IMPORTANT

It is recommended that users change the default password "123456" as soon as possible after opening the gun cabinet for the first time to prevent unauthorized access to your gun cabinet.

The Second User Code Programming

1. Open the safe, keep it open, touch to wake up the screen, enter 0 twice, then short press the setting button (on the inner side of the door), the safe beeps once and the keypad lights on.
2. Input a new code(3-12 digits),then press # to confirm. The buzzer plays a chord, indicating that the code is successfully set.
3. Test the code before you close the door.

⚠ IMPORTANT

1. 10 seconds without any operation after pressing the setting button, it will go back to standby mode, you need to retry.
2. Please set up both of two codes immediately after receiving the safe.
3. A single beep indicates that the code has been set successfully, thrice beep indicates that the two codes entries are inconsistent, please repeat the procedures.

Low Battery Warning

After installing the batteries or entering the password, if the safe is consistently beeping, it indicates that the battery power is low and new batteries need to be replaced.

Dual Alarm System

1. After 3 consecutive times of wrong codes，the alarm system will be activated and last 30 seconds,enter the right code,then #,to cancel it.
2. In standby state, press＊, there is a beep and all the lights came on at once, the vibration alarm mode is turned on. If the box is shaken or hit violently, it will give an alarm immediately for 30 seconds, at this point, enter the correct code to stop the alarm.
⚠NOTICE:
1.After safe is opened with code, the vibration alarm will turned off and needs to be turned on again.
2.When you forget the code, the alarm can be stopped by using the key to open the safe and remove the battery to cut off the power.
Restore Factory Settings

Keep pressing the setting button for 5 seconds until you hear a beep, indicating that the reset has been successful. At this point, all codes will be invalid and need to be reset.
NOTICE:
The default code is "123456".

**1. The first way to open: Use the emergency key.**

Insert the emergency key into the right keyhole, turn counterclockwise to the limit and hold still, then rotate the knob clockwise to open the safe (Suitable for the first opening, forget code or weak battery).

2.The second way to open: Use the code.

After installing the battery, enter your code and then press the **#** key to confirm, rotate the knob clockwise to open the safe (Suitable for quick access and daily use).

3. The third way to open: Use the emergency battery box + code
When the battery of your safe is weak and you can't find the keys, please insert the emergency battery box into the external power jack, then enter the correct code to open the door (Suitable for the battery is out of power and the key can not be found).

NOTICE:
Every time you open the safe, you need to press the "#" key first, then enter your code, press the "#" key to confirm, and turn the knob clockwise to open.
